It is very important for anyone handling any type of bird or animal to wash their hands thoroughly before preparing food or putting hands in their mouth. It is especially important that children understand the necessity of this sanitary procedure when they are handling poultry. There is a 90% accuracy as to the sex of the chicks. It is difficult to sex day old chicks, so there is a 10% chance your chick will NOT grow to be the hen or rooster that you ordered. The term "straight run" (*S/R) means that the chicks have not been sexed at all. The term "pullet" means that the chick will grow to be an egg laying chicken.

All pullet chicks are vaccinated for Marek's only

Please take into account when ordering that there is not an absolute guarantee that the chick will be the desired sex.

Helpful Tips

- Poultry is sexed with roughly a 90% accuracy. Unless stated as "Straight Run" meaning 50% chance.
- Baby chicks are NOT vaccinated against coccidiosis. (It is strongly recommended to feed Blue Seal Medicated Chick Starter.)
- Baby poultry need to be kept at 95°F for the first week, and decrease 5°F per week thereafter.
- Make sure they always have fresh water, feed, and bedding.
